

Barriers

At Securitas Security Services Ireland we have a wide range of Car Park barriers that can be used stand alone or alongside our access control systems.

Whether you need to reduce the risk of theft or have an event to manage, we offer a vast range of low cost solutions including parking barriers, car barriers, traffic barriers, vehicle barriers and more, please call +353-1-801 5572 for more information on our services and for price enquiries

How does a Barrier work?

A barrier frame is made from galvanised steel, the hydraulic pump raises the lightweight rectangular boom (various lengths) with a manual override allowing users the ability to raise if required.

Sensors and underground induction loops can detect that a vehicle has passed through to then lower the barrier safely.

Barriers can be raised for entry and exit by a number of different methods as explained below -

Push Button - allowing users to simply push a button for entry and exit.

Numbered Key Pad - the user will enter a specific code to allow entry/exit maximizing security.

Proximity or swipe Card - Users will be given cards to present to the reader on the barrier which will allow entry/ exit. Telephone or video entry- Works like any other intercom/ video entry system allowing the customer to monitor who is allowed onto site.

Automatic Barriers

The Automatic Raise Arm Barrier is designed to offer long term reliability, efficient operation and durability. The barrier incorporates a 3 phase inverter driven motor and gearbox drive which provides a smooth consistent operation. It is controlled by a Programmable Logic Controller, which can be programmed to suit all of your requirements.

Page 3 of 5

This barrier can be interfaced with many other access control options, such as -

- Remote Control
- Proximity Cards
- Token or coin machines
- Keypads
- Spans up to 6 metres with adjustable speed control varying from 1.2 to 6 seconds.

Manual Swing Arm Barrier

Constructed from high quality steel hollow box section, the robust structure of the Swing Arm Barrier means it is ideally employed in unmanned areas or in areas where there is a requirement for low volume traffic control.

The access gate can be locked in either the open or closed position via an additional latch post or a padlock respectively.

Manual Raise Arm Barrier

The Manual Raise Arm Barrier provides an ideal low cost solution to a wide variety of parking, road access and traffic management requirements.

This durable, hardworking barrier can be locked in either the vertical or horizontal position, providing excellent security to any specified area when required.

The barrier offers an excellent and cost effective solution for locations or situations where a fully automated barrier entry system is either not necessary or not cost effective.

Height Restriction Barrier

Constructed from high quality steel rectangular box section, the Height Restriction Barrier provides an ideal solution for the prevention of access to unauthorised areas such as staff car parks or underground low-level car parks. Clear signage allows vehicle occupants the opportunity to determine whether they have sufficient clearances to proceed under the Height Restriction barrier in order to access their intended destination.
