## For your personal safety

We offer high-tech safety, security and information services for people, vehicles and assets connected to the Secure Operating Centers. Round-the-clock, seven days a week, we watch over assets that are important for people, companies and society. As our customer you have direct access to our international organization and network. With a high level of service and knowledge we contribute to Securitas' work towards a safer Europe for our customers. Track and trace is a business area in Alert Services, a division within Securitas.

Securitas - more than 75 years in the security industry | 1934 - 2009

## Quick response to accidents or threatening situations at work

*The need for personal safety is continuously increasing. Securitas offers security solutions for everyone who experiences a potential danger in their job. This especially applies to lone workers, i. e. people who often work alone or in remote places, for example service technicians on assignments or staff within medical care and nursing. We design a safety package that completely suits the requirements of your company or organization. Our solutions are flexible and easily integrated into existing systems.*

### **A leader within personal safety & security with a network of alarm centers all over Europe**

Securitas leads the market and offers GPS-based services that are easy to use and reliable. Our safety and security solutions for people in exposed situations are easy to use. In the event of an accident or threatening situation the person sends an alarm to the Securitas Alarm Center, by simply pressing a button on a portable alarm unit. This starts a phone connection between the person and operator. The operator knows who you are, can directly see your position and can immediately take appropriate action according to the agreed alarm plan. In some situations, the right action could be to send a Securitas guard and notify the responsible contact people. In other cases, the operator directly contacts the emergency services, leading them directly to your position. We also offer security solutions that indicate if a person has a fall. Securitas has a complete network of alarm centers all over Europe. When

your staff travel on assignments, Securitas safety is always by their side.

### **Peace of mind for lone workers**

Our security solutions fulfill the demands set by authorities regarding increased security for lone workers. Our safety solutions increase security at several levels in your business by following up on routines, such as regular testing connections. If we see that a co-worker has not reported, or signed off a task, our action could be to contact the nearest manager. Our promise to your staff: You are never alone.

### **The benefits we bring**

- Pan European supplier with seamless cross border services - all over Europe
